DEVCON 2026

The conference for builders.

OCT 17–19 2026

BROOKLYN NAVY YARD · NEW YORK CITY

THREE DAYS
Workshops, deep talks, and a hardware playground. Bring a laptop and a question.

FOUR TRACKS
Systems, AI, web platform, and the often-underrated practice of writing things down.

ONE GOAL
Leave with one thing you didn't know how to do on Friday morning, working by Monday.

TRACKS

SYSTEMS

What happens when the abstractions leak. Linux internals, distributed primitives, observability without the dashboards.

AI / ML

Training loops you can read end-to-end, evaluation that survives contact with users, and small models that earn their keep.

WEB PLATFORM

The browser as deployment target, edge runtimes, the parts of HTTP your framework hides from you.

CRAFT

Code review that stays kind, the writing system that makes a team faster, and a defense of leaving things half-finished.

FEATURED SPEAKERS

Mira Okafor
Principal Engineer
Constellation

Hideo Tan
Compiler Hacker
Independent

Lena Voss
Editor Console
Magazine

Ari Patel
Founder Slate
Systems
